

## RAINWATER DIVERTERS

Guttercrest can manufacture rainwater diverters to suit any of our downpipe styles and can be supplied in kit form with the necessary connections to attach to a waterbutt.

They allow the diversion of the rainwater collected in the guttering system to pass into a water collection tank, when the tank is full the water will then flow back into the drainage system, preventing overflow.

### BENEFITS INCLUDE:

- Ideal for watering plants as it does not contain chlorine and other chemicals.
- Environmentally friendly as it provides water without using high impact processes required for mains drinking water.
- Ideal for washing cars and watering plants.
- Saves Money
- Reduces strain on drainage system

## GUTTER LEAF GUARDS

To prevent gutters from blocking with moss and leaves etc. in certain locations it may be necessary to install a leaf guard.

Guttercrest can supply different types of protection depending on requirements.
